What is claimed is:

- 1. A refinish composition comprising an hydroxyl-functional acrylic polymer, wherein the acrylic polymer has a number average molecular weight of at least about 5000 and is polymerized using at least about 45% by weight of a cycloaliphatic monomer, based on the total weight of monomers polymerized, and further wherein the refinish composition is a refinish clearcoat composition.
- A refinish composition according to claim 1, wherein the hydroxylfunctional acrylic polymer is at least about 2% by weight, based on nonvolatile binder material.
- A refinish composition according to claim 1, wherein the hydroxylfunctional acrylic polymer is at least about 5% by weight, based on nonvolatile binder material.
- A refinish composition according to claim 1, further comprising a second hydroxyl-functional acrylic polymer.
- A refinish composition according to claim 1, wherein the acrylic
 polymer has a weight average molecular weight of at least about 17,000.

5

- A refinish composition according to claim 1, wherein the
 cycloaliphatic monomer comprises a member selected from the group consisting
 of cyclohexyl acrylate, cyclohexyl methacrylate, isobornyl acrylate, isobornyl
 methacrylate, and combinations thereof.
- A refinish composition according to claim 1, wherein the cycloaliphatic monomer is at least about 60% by weight, based on the total weight of monomers polymerized.
- A refinish composition according to claim 1, wherein the cycloaliphatic monomer is up to about 85% by weight, based on the total weight of monomers polymerized.
- A refinish composition according to claim 1, wherein the acrylic polymer has an hydroxyl number of from about 45 mg KOH/g polymer to about 75 mg KOH/g polymer.
- 10. A refinish composition according to claim 1, wherein the acrylic polymer is polymerized from monomers comprising from about 1% to about 25% by weight of a combination of styrene, n-butyl methacrylate, and n-butyl acrylate, based on the total weight of monomers polymerized.

20

- 11. A refinish composition according to claim 1, wherein an about 55% by weight solution of the acrylic polymer in n-butyl acetate has a viscosity less than or equal to about 10 Stokes at 25°C.
- 5 12. A refinish composition according to claim 1, wherein an about 55% by weight solution of the acrylic polymer in n-butyl acetate has a viscosity less than or equal to about 8.8 Stokes at 25°C.
 - 13. A refinish multi-component coating composition, comprising
 - (a) a first component comprising an hydroxyl-functional acrylic polymer that has a number average molecular weight of at least about 5000 and is polymerized using at least about 45% by weight of a cycloaliphatic monomer, based on the total weight of monomers polymerized the hydroxyl-functional acrylic polymer and
 - (b) a second component comprising a curing agent; wherein the refinish coating composition is a clearcoat composition.
 - A refinish multi-component coating composition according to claim
 wherein the curing agent is reactive with the hydroxyl-functional acrylic polymer.

20

- A refinish multi-component coating composition according to claim
 wherein the first component comprises a further polymer or resin reactive with the curing agent.
- 5 16. A method of refinishing a substrate, comprising steps of:
 - (a) applying to a desired area of the substrate a layer of a refinish basecoat composition;
 - (b) allowing the applied layer of basecoat composition to dry; and
 - (c) applying over the layer of basecoat composition a clearcoat composition comprising an hydroxyl-functional acrylic polymer, wherein the acrylic polymer has a number average molecular weight of at least about 5000 and is polymerized using at least about 45% by weight of a cycloaliphatic monomer, based on the total weight of monomers polymerized.
 - 17. A method according to claim 16, wherein the clearcoat composition is thermosetting.
 - 18. A method according to claim 16, wherein the clearcoat composition comprises at least one material reactive with the hydroxyl-functional acrylic polymer.

- 19. A method according to claim 18, wherein the material reactive with the hydroxyl-functional acrylic polymer comprises the isocyanurate of hexamethylene disocyanate.
- 5 20. A method according to claim 16, wherein the substrate is an automotive vehicle or a component of an automotive vehicle.
 - A refinished substrate prepared according to the method of claim
